PROFESSIONAL SUMMARY

Digital marketer with five years of hands-on content and audience growth experience, and I build the marketing tools I need myself, using Claude, without an engineering team or a software budget. Grew three creator channels from zero to 9M+ views and lifted client monthly recurring revenue 15% through social media management. Now I freelance with an internal toolset: sponsor prospecting, retention reporting, content ideation and a community rewards bot, all built with Claude and running in production. HubSpot certified and SQL Associate certified

WORK EXPERIENCE

AI Automation Workflow | Freelance (Operating as IAC Media Network)

Feb 2026 – Present | Remote

Run four YouTube channels end to end (SwaggerSoulsTV, PilavTV, Subathon 2 Recaps, Kul Tiras WoW) on an internal toolset built and maintained solo.

- **Brand deal engine:** ingests YouTube transcripts across a channel list, runs a self-hosted LLM to extract sponsor mentions and enriches the companies through the Apollo API, replacing manual research per creator and turning sponsor outreach into a repeatable pipeline.
- **Retention reporting:** turns raw channel analytics exports into structured drop-off reports showing where viewers leave, with a locally hosted LLM through Ollama over video transcripts to explain click-through drops.
- **Trend validation:** built an idea-validation tool with Claude and Codex that scores content concepts against live trend data before production starts, so creators commit time only to ideas with demand behind them. In addition, I built a database that saves and stores the information gathered by the tool for future references.
- **Community rewards bot:** gamified points, leaderboards and scheduled rewards running unattended for an 896-member creator community.
- Maintain all four tools in production, diagnose failures without support and ship improvements weekly.

Digital Marketing Intern | METRO Romania

Apr 2026 – May 2026 | București, On-site

B2B digital marketing team, working across website UX, PR, CRM and paid campaigns.

- **Campaign brief generator:** built a tool that turns raw product information into structured Google Ads and Meta Ads Manager briefs, cutting turnaround from 40 minutes to around 10.
- Audited METRO's B2B digital channels for usability and competitive position, filing around 5 usability issues and defects, and contributed to campaign planning and email campaigns for the M.Companion app.
- Produced campaign creative for the M.Companion app, the Fish Catalog and the METRO gastronomy guide: concept visuals in Canva and edited video testimonials used on the METRO website and in the Guacamole campaign.

Social Media Manager & Video Editor | Freelance

Dec 2020 – Feb 2026 | Remote

Five years of channel operations for three creators, including FaZe Clan members, SwaggerSouls, Pilav and other content creators. Thumbnail and title decisions ran through structured A/B testing; cadence was tuned against retention data and audience time zones.

- Grew three creator channels from 0 to 13,600 combined subscribers through title, thumbnail and publishing-cadence strategy.
- Delivered 9M+ views across three channels in under three months, across both short-form and long-form video.
- Lifted monthly recurring revenue by around 15% for two creators by migrating their communities from Twitch to YouTube.
- Edited long-form gaming content and high-retention short-form in Premiere Pro, After Effects and Blender, averaging 45% audience retention on long-form.

Volunteer | TNL Giurgiu

Jan 2023 – Dec 2024 | Giurgiu, On-site

- Coordinated teams of 20 volunteers across 3 city cleaning campaigns and civic education events.
- Managed logistics and scheduling for municipal meetings and city planning conferences with 50 attendees.

PROJECTS

Cutline — AI Video Generation Pipeline (<https://github.com/IonitaAC/Cutline>)

Jul 2026 – Present | TypeScript, Node.js, FFmpeg, headless Chrome

A Tool that turns a written brief into a finished promo video with transitions, VFX and color grading exactly as a Human would edit it.

- Built a prompt-to-video pipeline in TypeScript and Node: validated storyboard JSON composes to HTML, which renders through headless Chrome and FFmpeg to 1920x1080 H.264/AAC at -14 LUFS.
- Made the pipeline reproducible before building anything on top of it: two composition runs produce byte-identical HTML, and 60 golden frames across 10 cases hold at SSIM 1.000000.

- Caught a text-contrast gate that had been blind since it was written, reporting 7 of 7 passing where pixel measurement gave 0 of 11. Replaced the fixed overlay value with a per-shot calculation from source pixels, taking one storyboard from 3 of 13 to 13 of 13.
- Found the golden-frame suite exiting green while checking zero cases, after three directories it referenced were renamed. An empty selection now fails instead of passing.
- Found a crash-recovery defect that would have billed the generation provider twice, by running the mock adapters at realistic latency across 14 cold jobs instead of trusting the code path.

Autonomous Systems on Mars — Technical Design Assessment (<https://github.com/IonitaAC/autonomous-systems-mars>)

Aug 2026 | Public repo: github.com/IonitaAC

- Made the decision loop executable in Python and ran it, surfacing six defects including two crashes that fire only in the brief's own endgame. Reading the code had missed all six.
- Found a unit error in the published vehicle figures: cruise speed is a Mach number, and converting it against Earth's speed of sound rather than Mars's overstates it by roughly 45%.
- Separated genuinely independent sensors from the pairs that are one measurement counted twice, so agreement between correlated channels could not raise confidence without raising information.

iacmedianetwork.com — React site with a custom prerendering build (<https://www.iacmedianetwork.com/>)

2026 | React 18, Vite, Tailwind, Cloudflare Pages

- Built a three-stage build (client bundle, SSR bundle, then a Node prerender script emitting static HTML per route) so crawlers and link-preview bots that do not execute JavaScript receive complete page content, without migrating to a framework.
- Found and fixed a latent routing bug where any unmatched URL rendered a blank page, because the SPA rewrite returns HTTP 200 for every path and the client router was the site's only 404 behaviour. Removed roughly 1,500 lines of dead code in the same pass.
- Held accessibility and search structure to a measured standard: colour pairs checked against WCAG AA and documented in the theme config, 44px touch targets, keyboard focus management, per-route canonicals and JSON-LD for Organization, Person, Service and BreadcrumbList.

Bachelor's Thesis — Moment-Level Viewer Abandonment in Creator Video

In progress | Supervisor: Costin Baroiu, ASE București

- Building a dataset of ~500 videos across 4 channels I operate, combining YouTube retention curves with machine-generated transcripts and edit-level features, giving roughly 50,000 moment-level observations.
- Modelling which pacing, content and editing characteristics predict abnormal drop-off, using panel regression with video fixed effects alongside gradient boosting, including the retention cost of creator-read sponsor segments, a figure the industry currently estimates without measuring.

Tough Love — AI Accountability Coach (Alpha)

2026 | Cross-platform mobile

- Shipped a working alpha solo: a cross-platform habit-tracking and anti-procrastination app with photo and GPS-based task verification, points, leaderboards and squads.

SKILLS

Languages & Frameworks: Python, TypeScript/JavaScript, SQL, Dart, Kotlin, HTML/CSS; FastAPI, Pydantic, Node.js, React, Vite, Tailwind CSS.

Data & Infrastructure: REST API design, SQLite, async concurrency, web scraping and data normalisation, rate-limit handling, Docker and Docker Compose, Linux, Git/GitHub, Cloudflare Workers and Pages.

AI & Automation: Self-hosted LLM inference (Ollama), prompt design, AI-assisted development (Claude Code), Make, Apollo, workflow design, webhooks, scheduled automation.

Testing & Verification: Golden-frame regression testing, image diffing (SSIM), mutation testing, rule-based linting, deterministic build verification.

Media Engineering & Production: FFmpeg, headless Chrome rendering, Adobe Premiere Pro, After Effects, Blender, Canva, CapCut.

Marketing & Analytics: Content strategy, audience growth, A/B testing, SEO, campaign briefs, Google Ads, Meta Ads Manager, HubSpot (certified), YouTube Studio Analytics, retention and drop-off analysis, community management.

Business Systems: Excel (XLOOKUP, INDEX-MATCH, pivot tables and charts, SUMIFS/COUNTIFS, Text-to-Columns, data validation), SAP, Google Workspace.

Languages: Romanian (native), English (B2). Driving licence, Category B.

EDUCATION

Business Administration in Foreign Languages (FABIZ), in English | ASE București

Oct 2024 – Jul 2027 (expected) | București

- Relevant coursework: Business Process Management, CRM, Marketing, Statistics, Finance, Economics, Business Law, European Law, Machine Learning Tools, SAP.

CERTIFICATIONS

Digital Marketing, HubSpot Academy (Apr 2026) | SQL Associate, DataCamp (Apr 2026) | AI Fluency: Framework & Foundations, Anthropic (Jul 2026) | AI Essentials, Google (Apr 2026)
