PROFESSIONAL SUMMARY

Digital marketer with five years of hands-on content and audience growth experience, and I build the marketing tools I need myself, using Claude, without an engineering team or a software budget. Grew three creator channels from zero to 9M+ views and lifted client monthly recurring revenue 15% through social media management. Now I freelance with an internal toolset: sponsor prospecting, retention reporting, content ideation and a community rewards bot, all built with Claude and running in production. HubSpot certified and SQL Associate certified.

WORK EXPERIENCE

AI Workflow | Freelance (Operating as IAC Media Network)

Feb 2026 – Present | Freelance, Remote

I manage social media and four YouTube channels for content creators: SwaggerSoulsTV, PilavTV, Subathon 2 Recaps and Kul Tiras WoW. I designed and built the internal toolset with Claude and Claude Code and run the day-to-day operation on Claude Cowork.

Key Achievements:

- **Brand Deal & Sponsorship Engine:** built an automated sponsor-prospecting system with Claude Code and Gemini that identifies which brands are already sponsoring in a creator's niche and enriches them into a contact-ready lead list through Apollo (Free Tier), replacing manual research per creator and turning sponsor outreach into a repeatable pipeline.
- **Audience Drop-off Analysis:** built a retention-reporting tool with Claude Code that turns raw channel analytics exports (csv files) into structured drop-off reports showing exactly where viewers leave. In addition, I use a locally run AI model that processes the transcript of a video to understand exactly why CTR dropped.
- **Trend Finder:** built an idea-validation tool with Claude and Codex that scores content concepts against live trend data before production starts, so creators commit time only to ideas with demand behind them. In addition, I built a database that saves and stores the information gathered by the tool for future references.
- **Community rewards system:** built an automated loyalty and recognition bot for Discord with Claude for an 896-member creator community: gamified points, leaderboards and scheduled rewards running unattended, converting passive subscribers or followers into a returning, engaged audience.
- Maintain all five tools in production, diagnose failures myself and improve the tools weekly.

Digital Marketing Intern | METRO Romania

Apr 2026 – May 2026 | București, On-site

Internship on the B2B digital marketing team, working across website UX/UI, PR, CRM and ad campaigns.

Key Responsibilities

- Ran a UX audit and SWOT analysis of METRO's B2B digital channels, suggested improvements and found bugs that needed fixing. Also, contributed to campaign planning and email campaigns for the M.Companion app.
- **Campaign brief generator:** I built a tool with Claude Code that turns raw product information into structured Google Ads and Meta Ads Manager campaign briefs, cutting turnaround from 40 minutes to around 10 minutes.
- Produced campaign creative for the M.Companion app, the Fish Catalog and the METRO gastronomy guide: concept visuals designed in Canva and edited video testimonials used on the METRO website and in the Guacamole campaign.

YouTube Channel Manager & Content Strategist | Freelance

Dec 2020 – Apr 2026 | Remote

Five years managing social media channels and audience growth for three YouTube creators. My responsibilities were: editing, thumbnails, titles, publishing, community management and promoting. Thumbnail and title decisions ran through structured A/B testing and cadence was tuned against retention data and time zones.

Key Responsibilities

- Grew three creator channels from 0 to 13,600 combined subscribers through title, thumbnail and publishing-cadence strategy.
- Delivered 9M+ views across three channels in under three months, across both short-form and long-form video.
- Grew monthly recurring revenue by around 15% for two creators by leading their communities from Twitch to YouTube for exposure and reach.
- Managed full content operations for creators including FaZe Clan members, SwaggerSouls and Pilav: editing, thumbnail design, title strategy, publishing schedule and community management.

- Edited long-form gaming content and high-retention short-form video in Premiere Pro, After Effects and Blender, averaging 45% audience retention on long-form videos.

Volunteer | TNL Giurgiu

Jan 2023 – Dec 2024 | Giurgiu, On-site

- Coordinated teams of 20 volunteers across 3 city cleaning campaigns and civic education events.
- Managed logistics and scheduling for municipal meetings and city planning conferences with 50 attendees.

PROJECTS

Automated AI Video Generation Pipeline

- This tool generates production-ready videos by typing a prompt into a text box.
- Built an end-to-end automated video generation engine in Node.js and TypeScript, compiling structured storyboard drafts into broadcast-ready 1080p MP4.
- Designed a 3-stage validation pipeline that catches structural and character-budget errors before initiating paid media generation.
- Developed an automated FFmpeg audio graph executing frame-accurate VO placement (under 10ms variance).
- Engineered dynamic per-scene scrim contrast resolution from source video pixel luminance between retime and compose steps.

Autonomous Systems on Mars - Technical Assessment, Veridion

- Derived vehicle operating constraints from NASA NIAC Phase I MAGGIE concept data (179 km range, 52 min cruise endurance, 7.6 sol battery cycle), invalidating Ingenuity and ARES vehicle classes based on physical flight limits.
- Identified a 45% velocity calculation error in published concept figures caused by converting Mach 0.25 against Earth's speed of sound rather than Martian atmospheric CO₂.
- Repriced mission diversion trade-offs in Martian sols rather than minutes, showing a 40 km lateral diversion costs 1.7 sols of grounded solar recharge.
- Designed a multi-sensor fusion architecture separating correlated channels (optical camera, solar current) from independent channels (mmW radar, barometer, base station), using a 10-degree yaw parallax routine to isolate lens dust from approaching dust fronts.
- Formulated a minimax decision matrix operating under unverified class posteriors to evaluate reachable shelter sites (micro-spine wall docking vs. regolith anchoring), bounding worst-case mission risk.
- Formulated solutions for post-storm recovery traps (settled surface dust mimicking opaque sky) via vibration-cleaning current differentials and diurnal airmass curve profiling.

Tough Love - AI Accountability Coach (Alpha)

- Identified the problem, defined the product and directed the entire build using AI development tooling: a cross-platform habit-tracking and anti-procrastination app with photo and location-based task verification, points, leaderboards and squads.
- Took it from concept to a working alpha solo, with no engineering team and no budget.

Bachelor's Thesis – Moment-Level Viewer Abandonment in Creator Video

- Building a dataset of ~500 videos across 4 channels I operate, combining YouTube audience retention curves with machine-generated transcripts and edit-level features, giving roughly 50,000 moment-level observations.
- Modelling which pacing, content and editing characteristics predict abnormal viewer drop-off, using panel regression with video fixed effects alongside gradient boosting. Includes quantifying the retention cost of creator-read sponsor segments, a figure the industry currently estimates without measuring.

SKILLS

Marketing & Growth: Content strategy, audience growth, A/B testing, campaign briefs, competitive analysis, social media management, community management, copywriting for social media.

Paid Media & Analytics: YouTube Studio Analytics, campaign reporting, retention and drop-off analysis, SQL (DataCamp certified), Excel.

CRM & Marketing Automation: HubSpot (certified), Apollo, Make, workflow design, lead generation and outbound prospecting, scheduled automation, webhooks, cross-platform integrations.

AI Workflow: Claude, Claude Code, Claude Cowork, AI-assisted tool building, prompt design, process automation, workflow documentation and handover.

Content Production: Adobe Premiere Pro, After Effects, Blender, Canva, Capcut.

Business Systems: SAP, Excel, Google Workspace.

Languages: Romanian (native), English (C1).

Other: Driving licence, Category B.

EDUCATION

Business Administration in Foreign Languages (FABIZ), in English | ASE București

Oct 2024 – Jul 2027 (expected) | București

- Relevant coursework: Business Process Management, CRM, Marketing, Statistics, Finance, Economics, Business Law, European Law, Machine Learning Tools, SAP

CERTIFICATIONS

Digital Marketing - HubSpot Academy (Apr 2026) | SQL Associate - DataCamp (Apr 2026) | AI Fluency: Framework & Foundations - Anthropic (Jul 2026) | AI Essentials - Google (Apr 2026)
