PROFESSIONAL SUMMARY

Python developer who builds data acquisition pipelines end to end: find the source, work out its shape, normalise it, and get it into production. Built and maintain five internal production tools, including a company-data engine that scrapes undocumented sources, validates them against a single schema, enriches records through Apollo, and matches them against criteria. Comfortable with sources that arrive different every time. SQL Associate certified, and I use AI tooling daily with a working sense of when to check its output. Seeking a Data Assets Intern role.

WORK EXPERIENCE

Freelance Python Developer | IAC Media Network

Feb 2026 – Present | Remote

- Built a "Brand Deal & Sponsorship Engine" that ingests company and channel data from multiple undocumented sources, normalises inconsistent records into one Pydantic-validated schema, enriches them through the Apollo API, and matches them against target criteria. Python, FastAPI, asyncio and ThreadPoolExecutor concurrency, with Make automating the handoffs between platforms.
- Built "Audience Drop-off Analysis", a FastAPI service that ingests raw analytics exports and transcripts arriving in varying formats and returns structured retention data, cutting a 1-hour manual review to 5 minutes per file.
- Deployed a self-hosted LLM behind a FastAPI endpoint via Ollama for classification and extraction where direct parsing was not viable, removing all per-request API costs.
- Maintain all five tools in production, including the ingestion layer, and diagnose failures myself when a source changes shape or output stops looking right.
- Containerised and deployed services on Docker Compose, including a rewards bot handling database state and scheduled jobs for an 896-member community.
- Scoped, priced and delivered every project for every client personally, with no manager and no handover.

Digital Marketing Intern | METRO Romania

Apr 2026 – May 2026 | București, On-site

- Built a Python tool that converts unstructured product inputs into structured, validated campaign briefs, cutting turnaround from 40 minutes to 10.
- Gathered and structured competitor data across B2B digital channels into an analysis used for campaign planning.

Freelance Content Operations & Analytics | Self-employed

Dec 2020 – Apr 2026 | Remote

- Wrote Python scripts to automate data sourcing and trend research across changing web sources, cutting research time by 60%.
- Worked directly in analytics data to find what the summary dashboards hid, driving a 15% monthly recurring revenue lift for two clients and 45% average retention across output.
- Managed operations for three client channels grown from 0 to 13,600 subscribers and 9M+ views, owning delivery across time zones.

Volunteer Coordinator | TNL Giurgiu

Jan 2023 – Dec 2024 | Giurgiu, On-site

- Coordinated 20 volunteers and ran logistics for municipal events with up to 50 attendees.

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript (ES6/JSX), TypeScript, Dart, Kotlin, HTML5/CSS3

Data & Pipelines: Web scraping, data normalisation, schema validation (Pydantic), REST API integration, Apollo, Make, SQLite and aiosqlite, asyncio, ThreadPoolExecutor concurrency, data quality checking

AI & LLM: LLM application integration, self-hosted models via Ollama, prompt engineering, extraction and classification, AI-assisted development (Claude Code, OpenCode)

Backend & Infrastructure: FastAPI, Uvicorn, Docker, Docker Compose, Linux, Git, GitHub, REST API design

Analysis & Tooling: SQL (DataCamp certified), Excel, YouTube Studio Analytics, SAP

Languages spoken: Romanian (native), English (B2)

PROJECTS

Tough Love — AI Accountability Coach (Alpha)

- Cross-platform habit-tracking app with photo-based task verification, points, leaderboards and squads. Full codebase architected solo in Dart, TypeScript and Kotlin, with Riverpod for state and GoRouter for navigation.

Bachelor's Thesis — LLM-Assisted Business Process Improvement for SMEs

- Researching how large language models support business process maturity assessment for SMEs in emerging markets. Supervised by Costin Băroiu, ASE București.

EDUCATION

BSc Business Administration (FABIZ), English track | ASE București

Oct 2024 – Jul 2027 (expected) | București

- Relevant coursework: Machine Learning, Statistics, Business Process Management, CRM, Finance, Economics, SAP.

CERTIFICATIONS

SQL Associate — DataCamp (Apr 2026) | AI Fluency: Framework & Foundations — Anthropic (Jul 2026) | AI Essentials — Google (Apr 2026) | Digital Marketing — HubSpot Academy (Apr 2026)
